

CLAIMS

What is claimed is:

1. A light card, comprising a base (1) at least one light emitting element (4) disposed on said base (1) and a cover layer (2) having at least one light transparent area (7), said cover layer (2) consisting of a light permeable foil which, except for the light transparent area (7), is imprinted by a coloring agent which is impermeable to light.

2. A light card according to claim 1, wherein the light transparent area (7) is imprinted by a bright sign coloring agent and the light emitting element (4) is an ultraviolet light emitting diode.

3. A light card according to claim 1, wherein said foil is imprinted on the side thereof facing said base (1).

4. A light card according to claim 1, wherein said cover layer comprises a foil (2), which is roughened at the side thereof facing away from said base (1).

5. A light card according to claim 1, wherein an intermediate layer (3) is disposed between said base (1) and said cover layer (2), said intermediate layer (3) having recesses, in which said light emitting elements (4), said power supply (5) and an operating element (6) are disposed.

6. A light card according to claim 5, wherein said intermediate layer (3) consists of foam rubber.

7. A light card according to claim 1, wherein said light emitting elements (4) are cemented onto said base (1).

8. A light card according to claim 5, wherein said base (1), said intermediate layer (3) and said cover layer (2) are cemented together.

9. A light card according to claim 1, wherein highly reflective side limit areas are arranged on said base (1) below the light permeable areas.

10. A light card according to claim 1, wherein a connection for an external power supply is provided.
